

CONSTELLATION

APOLLO

When you need to protect pumps or equipment—but not with a full walk-in shelter—**Openchannelflow** offers a range of drop-over enclosures to suit diverse needs.

GEMINI

Ideal for smaller pump or feed systems, Gemini enclosures feature hinged gullwing doors, full insulation, and integral floors for light spill containment.

APOLLO

For larger setups or grade-level pump access, our Apollo series comes in three sizes, each with double front and back doors for easy operator access.

VANGUARD

For low-maintenance or limited-access applications, Vanguard enclosures provide fast drop-over protection. Optional hinged designs allow for occasional tip-up inspections.

CONSTELLATION

When protecting larger pumps or equipment without a walk-in shelter, the modular Constellation line offers flexible access—remove side panels, the top, or fully disassemble on site with minimal tools and effort.

CUSTOMIZATION

Need something more than just a bare enclosure? All **Openchannelflow** enclosures can come with a long list of HVAC, electrical components, and other special features factory installed before delivery, reducing installation time.
